## SEMESTER – II

### URP-121, CITY AND METROPOLITAN PLANNING

#### OBJECTIVE

- To aware of the aspects such as urban growth, systems, linkages between city and region, problems and issues of metro and mega cities and planning for the metropolitan areas.

#### CONTENTS

- **Unit-1 Introduction**  
Concept and approaches to metropolitan planning; Theorizing the city- Chicago school, Postmodern school, Post structuralist school; Critical urban theory
- **Unit-2 Metropolitan Area**  
Delineation techniques of metropolitan areas; Primate city; Metro and mega cities-issues, processes and trend; Urban culture.
- **Unit-3 Urban Sprawl**  
Urban sprawl and suburbanization; Core-periphery; Transit oriented development; Global city and City regions; Urban and rural transformation, urban rural continuum; Urban sprawl projections.
- **Unit-4 Urban Economy**  
Urban economics; City as growth engine; Economic restructuring; The post 1973 world; Neo-liberal cities; Gentrification and the Revanchist city; Public space and right to the city.
- **Unit-5 Governance**  
Collaborative governance in cities; Decentralization and Metropolitan, Planning committees, Indian policies (73rd and 74th Constitutional Amendments) and programs related to metropolitan planning; Inter-sectorality.

#### COURSE OUTCOMES

Upon the completion of this course, the students would be able:

- Understand urban growth, systems, city-region linkages, and metropolitan planning issues.
- Explore theoretical perspectives on cities for critical urban analysis.
- Examine delineation techniques, mega city issues, and urban cultures.
- Analyse urban economies, neoliberal trends, gentrification, and public space.

---

## **SEMESTER – II**

### **URP-122, URBAN HERITAGE AND CONSERVATION**

#### **OBJECTIVE**

- Evaluate the nature of the heritage conservation and management profession in a professional organization such as a consultant, governmental organization, NGO, research institute, etc.

#### **CONTENTS**

- **Unit 1: Introduction to Urban Heritage**  
Typology / classification, inventories, mapping; Human habitation in historical context; Heritage as a motivating force in sustainable urban conservation and development,
- **Unit 2: Heritage Conservation**  
Natural heritage conservation - typologies, policies for conservation, regulatory measures, community participation; Concept of Historic Urban Landscapes; Built heritage conservation - determinants of built form on heritage; Historic urban infrastructure and traditional water harvesting systems. Integration of historic monuments / areas / cores / urban systems in the developmental process and land use, regulatory measures and community involvement; Intangible cultural heritage and development: issues, conservation strategies. Preparation of conservation and heritage management plans.
- **Unit 3: Heritage and Tourism, Policies and Programmes, Legislation**  
Cultural and heritage-based tourism - nature, potential and prospects, marketing aspects; Acts and laws recognizing conservation / regeneration; Heritage toolkit; Implications of 74th Constitution Amendment Act.
- **Unit 4: Design in Human Habitation**  
Social / cultural / ecological / energy determinants of design; Imageability of the city; Structure of urban spaces – location criteria of activities and urban uses; Urban Regeneration, renewal, rehabilitation, revitalization, reconstruction and redevelopment - concepts, interventions, processes, approaches and methods, tools.

#### **COURSE OUTCOMES**

At the end of the course the students will-

- Understand the importance of Heritage Conservation. It's relevance in planning.
- Assess heritage conservation roles in professional settings: consultants, governments, NGOs, research institutes.
- Examine UNESCO World Heritage Convention, inscription process, monitoring, and conservation perspectives.

## **SEMESTER – II**

### **URP-123, DISTRICT PLANNING AND RURAL DEVELOPMENT**

#### **OBJECTIVE**

- To familiarize students with the concept of decentralized planning and its evolution in India.
- To provide students with an understanding of district-level planning processes, including data management, resource mapping, and funding determinations.
- To explore rural development programs, policies, and schemes in India and their implications for rural planning and development.

#### **CONTENT**

- **Unit 1: Introduction**  
Decentralized Planning in India – Historical perspective: Current Scenario – Recent Development in decentralized district level planning. 73rd and 74th Constitution Amendment Acts, Participative District Planning; Role of Planning Commission and Finance Commissions, and ICT in District Planning.
- **Unit 2: District Planning**  
Data Management and District Level Visioning, Institutional and other support for District Planning Committee, Bridging gap through district planning, resource mapping and determination of funding sources, consolidation of urban and rural plans; Multi-Sector and multi-level integrated approach to planning (vertical and horizontal spatial integration); Rural-Urban spatial relationship; District Development Plans – Guidelines for District Planning: Content and context and methodologies, Village Development Plans – an Integrated approach, rural norms and standards (spatial). Capacity Building for Decentralized Planning; Democratizing Information: using media for district development.
- **Unit 3: Rural Development - I**  
Introduction: Meaning and Scope and overview of rural development: Historical perspective – Rural Development Programmes in India. Problem / perception and identification; Rural Area Planning – Programmes / Policies / Schemes for rural development, their coverage and outcomes; Rural Infrastructure Development: Bharat Nirman – A business plan for rural infrastructure, Rural Building Centres, PMGSY, IAY, Rajiv Gandhi Technology Mission, Central Rural Sanitation Programme, PURA. Rural Employment Schemes: Mahatma Gandhi National Rural Employment Guarantee Act, 2005, Sampoorna Grameen Yojana, National Food for work programme, Swarna Jayanty Gram Swarozgar yojana, National Social Assistance Programme. Programmes: Command Area Programme, Drought Prone Area Programme, Backward Area Development Programme, North Eastern Development Programme. Technology Missions: Water, Sanitation, etc.
- **Unit 4: Rural Development - II**  
Changing Profile of the Rural areas of India: Consumption pattern changes, land utilization changes, cropping pattern changes, holding size change, living standard changes, changes in asset ownership – its implication in the planning process; Rural Settlement Analysis: Types,

activity, environment and economic interface in rural habitat, technology in rural settlement; Land Utilization: Types of land utilization and its relevance to planning; Land conversions and its regulation / facilitation in peri-urban areas; Land utilization analysis; Common property and its use, tenancy and ownership, holding size and its relevance, irrigated and non-irrigated and land values; Sources of information for land information; Technology in Rural Development: ICT in rural development, Rural Information system, Weather forecasting, disaster minimization, market information, etc. E-Panchayats, energy efficient technologies and alternative technologies; Inclusive Development: Special Component Plan - Tribal Sub Plan and Weaker Sector Plan allocation, implementation, monitoring and evaluation; North Eastern Plan.

## **COURSE OUTCOMES**

At the end of the course the students will-

- Gain insight into the historical evolution and current status of decentralized planning in India, including the role of constitutional amendments and participative district planning.
- Develop skills in data management, visioning, and institutional support required for effective district-level planning.
- Understand the multi-sectoral and integrated approach to district planning, including bridging the rural-urban divide and consolidating urban and rural plans.
- Analyse rural development programs, policies, and schemes, including infrastructure development, employment schemes, and technology missions, and evaluate their outcomes.
- Demonstrate proficiency in rural settlement analysis, land utilization planning, and the application of inclusive development strategies in rural areas.

## SEMESTER – II

### URP-124, URBAN TRANSPORT PLANNING AND MANAGEMENT

#### OBJECTIVE

- To acquire professional capacity in traffic and transportation planning.

#### CONTENTS

- **Unit-1 Introduction**  
Introduction to traffic and transportation planning in urban and regional context; Traffic and transportation, characteristics and problems of India.
- **Unit-2 Roads**  
Types of roads and planning standards; Road design and layout; Road intersections; Road cross sections; Street furniture; Design for road safety.
- **Unit-3 Traffic survey**  
Traffic and transportation surveys; Traffic zones, cordon lines and control stations; O and D surveys, home interviews and travel pattern data; Inventory of existing transportation facilities including parking. Traffic Management- traffic control systems, traffic signs, signals, speed regulations etc; Design for traffic segregation.
- **Unit-4 Planning and Management**  
Planning for parking. Traffic planning and forecasting- trip generation and methods of predicting trip generation; Models of traffic assignments. Roads and transport services in urban and rural settlement; Mass transportation in urban environment; Urban form in relation to traffic and transportation patterns; Sustainable transport systems; Environmental considerations.
- **Unit-5 Case Study**  
Case studies on best practices of traffic management and transportation services from India and abroad; New innovations and concepts in traffic and transportation.

#### COURSE OUTCOMES

At the end of the course the students will-

- Acquire expertise in urban traffic and transportation planning.
- Understand India's traffic characteristics and challenges.
- Learn Road types, design standards, and safety measures.
- Conduct traffic surveys and analyze transportation data.
- Explore mass transportation and sustainable transport systems.

## **SEMESTER – II**

### **URP-125, LAND ECONOMICS AND MANAGEMENT**

#### **OBJECTIVE**

- Study government policies on land, market forces guide and force development on different patterns based solely on the equilibrium of demand, supply and pricing.
- This course introduces students to the concept of land markets and development of cities with private developers with the interests of profit, as key players in the development process.

#### **CONTENTS**

- **Unit 1:**  
Urban land market and real estate market characteristics, Socio-economic and political factors influencing urban land markets, Urban land supply and demand conditions, Land pricing and transactions. Techniques of land assembly: acquisition, readjustment, pooling, sharing, plot reconstitution, land lease, cooperative of landowners.
- **Unit 2:**  
Local financial system in India: Taxation and fees, state and local fiscal relations, financing local fiscal services, local expenditure, capital budgeting, performance budgeting, financial resource mobilization, Policies and programs of related institutions.
- **Unit 3:**  
Systems of local governments in India, Development administration at National, state, district, local level, Functions, powers, Organizational structure and resources of local governments.
- **Unit 4:**  
Non-governmental development organizations and their relationship with local government, Citizen Participation. Personnel management: Manpower planning, performance appraisal, motivational aspects. Behaviour organization theory: authority and conflict, administration communication, leadership in administration, organizational changes.

#### **COURSE OUTCOMES**

At the end of the course the students will-

- Students will be able to learn how land economics work and how to manage the planning.
- Analyse government policies and market forces shaping urban land development.
- Explore urban land market characteristics and socio-economic factors influencing them.
- Examine techniques of land assembly and pricing, including acquisition and pooling.

---

## **SEMESTER – II**

### **URP-126, URBAN PLANNING STUDIO**

#### **OBJECTIVE**

- To understand contents, substance and characteristics of various types of development plans for predominantly urban settlements.
- To comprehend processes of plan preparation and analyses techniques for the identification of issues and potentials for an urban settlement.
- To evolve development policies, development control rules and regulations, land use plan and devise implementation mechanisms for a selected urban area.

#### **CONTENTS**

This studio is focused on the preparation of master development plan. Students are expected to not only prepare the master development plan for a city or city-region but also analyse debates around strengths and limitations of the idea of a master development plan. Data collection, analysis and plan proposals need to be framed in a collaborative and participatory manner.

The case town/city/region for the studio programme could be a combination of a large metropolitan area, a region, a hill town and a coastal town. Various towns/cities/regions could be selected and the work be distributed in groups.

#### **COURSE OUTCOMES**

Upon the completion of this course, the students would be able:

- To analyse the existing policy and planning literature on urban development plans, and to examine field survey data and information.
- To plan and design different future scenarios, priorities of development, action areas, phasing and monitoring, and to propose governance structures for the implementation of the plan.
- To produce spatial policies, and to make planning proposals along with a land use plan for a selected urban settlement.

---

## **SEMESTER – II**

### **URP-127, ELECTIVE-1 (DEMOGRAPHY AND PLANNING)**

#### **OBJECTIVE**

- To enhance the understanding of the students on the population dynamics and analyse the demographic demography data and information.

#### **CONTENT**

- **Unit-1 Demography**  
Definition, Scope and limitation; population size, composition and distribution; Demography and planning, urban and rural demography; social demography; demographic factors for spatial planning.
- **Unit-2 Demographic Theories**  
Traditional and modern theories of population, population dynamics, population transition, population and migration, fertility, mortality and migration; Age, gender and planning.
- **Unit-3 Demographic Methods**  
Data sources & limitations, crude and specific rates, methods of standardization, methods of data collection-principles in design of questionnaires, principles of sampling, types of sampling, sampling of population and area, sources of error, sample size.
- **Unit-4 Demographic Patterns, Policy and Development**  
Population patterns in India and the World; Distribution & structure of population, Population change causes & implications, demographic characteristics of population and their measures, population growth and development, natural growth and migration of population.
- **Unit-5 Population Projection & Life Tables**  
Population projection methods, application contexts, migration analysis, description and construction of life tables.

#### **COURSE OUTCOMES**

Upon the completion of this course, the students would be able:

- Understand the fundamentals of demography and its relevance to planning.
- Analyse demographic data using various methods and tools.
- Critically evaluate demographic theories and their application to planning processes.
- Interpret population patterns and their implications for policy and development.
- Apply population projection methods and life table construction in planning contexts.

---

## **SEMESTER – II**

### **URP-127, ELECTIVE-1 (URBAN RENEWAL)**

#### **OBJECTIVE**

- To provide basic conceptual understanding of heritage and conservation issues and to provide exposure to the contemporary conservation approaches.

#### **CONTENT**

- **Unit-1 Appreciation of Indian Art and Architecture**  
Evolution of Indian art and architecture – idea of shelter and its transformation; Reflections of society in architecture; Paradigm shifts in art history; Deterioration, conservation, preservation and maintenance.
- **Unit-2 Heritage: Definitions and Theory**  
Heritage definition and classification; Theoretical approach to heritage; Conservation method and approaches, case studies from world heritage sites and cities; Historical Settlements – Salient features, patterns, historical landscape and restoration of natural and artificial surrounding.
- **Unit-3 Planning for Conservation**  
Need for conservation, inclusion and heritage, policies of conservation, participatory heritage planning.
- **Unit-4 Policies and Future Plans**  
Policies related to conservation, institutional framework for heritage conservation; project planning; Identification of heritage sites, potential sites for conservation; generation of revenue – encouraging tourism, awareness, research and development.
- **Unit-5 Urban Renewal**  
Urban renewal as a part of metropolitan plan, techniques of identification of urban renewal areas, Conservation, rehabilitation and redevelopment, management of urban renewal areas, incentive zoning and TDR.

#### **COURSE OUTCOMES**

Upon the completion of this course, the students would be able:

- Understand the evolution of Indian art and architecture and its societal significance.
- Analyse heritage definitions, theories, and conservation approaches.
- Develop skills in planning for conservation and participatory heritage management.
- Evaluate policies and future plans related to heritage conservation.
- Demonstrate knowledge of urban renewal concepts, techniques, and management strategies.

---

## **SEMESTER – II**

### **URP-127, ELECTIVE-1 (SMART CITIES)**

#### **OBJECTIVE**

- To provide exposure to the emerging concepts and issues concerning future and smart cities.

#### **CONTENT**

- **Unit-1 Predecessors to Smart city**  
City branding initiatives – Sustainable cities, eco-cities, green cities, digital cities, intelligent cities, future cities, global cities and smart cities; Future cities; Smart City discourses developed in the USA, Europe and the Gulf States; application of the main themes of smart cities globally.
- **Unit-2 Smart Cities: Introduction to Concepts**  
Elements or dimensions of a smart city – smart economy, smart mobility, smart environment, smart people, smart living and smart governance; smart city capitals; Physical capital, human capital social capital and intellectual capital.
- **Unit-3 Smart City and Society**  
City and Society: Social Processes as Agents of Change – Living, Working, Mobility, Public facilities, Open data, the role of Information and Communication Technologies (ICTs) in developing smart cities: Smart Energy – smart buildings, smart transport, other related aspects for smart, inclusive and sustainable cities; Criticisms.
- **Unit-4 The Future of Urban Development and Smart Cities in India**  
The section focuses upon following latest developments relating to smart cities in India through reports, news paper articles and conferences, budgetary allocations, urban reforms and policies and capacity building proposed in India.
- **Unit-5 Measuring Smartness**  
Toolkits, Indexes and models developed to measure smartness; European Union smart cities.

#### **COURSE OUTCOMES**

Upon the completion of this course, the students would be able:

- Understand the evolution and global discourse on smart cities.
- Analyse the key dimensions and capitals of a smart city.
- Evaluate the role of ICTs and social processes in smart city development.
- Assess the latest developments and challenges in smart city initiatives in India.
- Utilize toolkits and indexes to measure smartness in urban contexts.
